EDUCATION

University of Kansas

B.S. Computer Science, Minor in Math | GPA 3.78/4.00

Lawrence, KS

May 2028 expected

- **Relevant Courses:** Digital Logic Design, Embedded Systems, Software Engineering, Discrete Structures, Operating Systems, DSA, Computer Architecture, Machine Learning, Theory of Computing, Modern Algebra, Linear Algebra

EXPERIENCE

SelectQuote - Software Engineering Intern (FinTech) | Overland Park, KS | May 2026 - August 2026

- Co-architecting and developing a full-stack internal financial platform using **React** and **Flask** to streamline the tracking and recovery of missing capital through the corporate appeals process.
- Engineering data processing pipelines utilizing **Pandas** and **NumPy** to clean, manipulate, and reconcile complex financial datasets for agent review.
- Participated in code reviews, integration testing, and Agile sprints to deploy production-ready software solutions.

University of Kansas IT - Student IT Technician | Lawrence, KS | May 2025 – November 2025

- Processed inbound support requests via phone, email, chat, and in-person, ensuring efficient response and resolution times.
- Maintained security and confidentiality standards in compliance with FERPA and departmental policies when handling user data and account access.

Sardius Media - Software Engineering Intern | Kansas City, MO | September 2023 - May 2024

- Engineered frontend features and interactive UI components using React and responsive design principles.
- Utilized Agile methodologies, including Jira, sprint planning, and team design sessions to optimize user interfaces

The Trade War Lab - Research Assistant / Lead Developer | Lawrence, KS | October 2025 - Present

- Architected and developed a web-based trade war simulation platform utilized to model complex U.S.-China macroeconomic negotiation scenarios.
- Applied the TIES framework and structured datasets to analyze regional impacts of trade policy
- Conducted statistical analysis and visualization in R to support research outputs

PROJECTS

TerraNova - Trading Real World Commodities

- Built a platform to enable companies to tokenize their RWAs, and allow users to trade them, using the **XRP Ledger**.
- Overall we won the tracks for **Best Business Analysis** and **Best Use of the XRP Ledger**
- Built for an education cohort capstone, cohort consisted of a series of talks and work shops about the web3 ecosystem

Echidna - Kernel Rootkit Agent for Mythic C2

- Developed kernel-level offensive tooling integrating with the Mythic C2 command-and-control framework
- Implemented mechanisms for simulating adversarial persistence and kernel activity for red-team security testing
- Built as part of the VICEROY cybersecurity research program

ACTIVITIES

Kansas Blockchain Institute (KUBI) - Member | Sep 2024 - Present

- 1st Place (Beginner Track) and 3rd Place (XRPL Track) at 2025 and 2026 Midwest Block-a-thons
- Earned “Best Business Analysis” and “Best Use of XRPL” for TerraNova capstone project
- Competed in University Blockchain Conference hackathon; MLH Hack Night winner

Midwest VICEROY Institute (MVI) - VICEROY Scholar | University of Kansas

- Awarded \$6,500 cybersecurity scholarship; engineered kernel-level rootkit agent (Echidna) for red-team simulation.
- Completed training in 5G/6G network security and cyber operations (recon., penetration testing, persistence techniques)
- Placed 7th/50 teams in the national Viceroy Cyber Competition (advanced CTF)

Certifications

CompTIA | Security+

June 2025

GIAC | Foundational Cybersecurity Technologies (GFACT)

May 2024

SKILLS

Languages: Python, JavaScript/TypeScript, C/C++, Rust, Solidity, SQL

Frameworks/Libraries: React, Next, Astro, Svelte, TailwindCSS

Tools: Git, Postman, Docker, Node, Linux, Windows, SSMS
